                                                                                              The present sequence encodes an envelope protein of MSRV-1. The envelope protein expressed by the endogenous human retrovirus MRSV-1 has superantigen activity associated with autoimmune disease. The protien can be detected using the method of the invention. The specification describes a process for detecting activity of a superantigen in a biological sample. The process comprises identifying large scale expansion or loss of lymphocytes that carry at least one of the Vbetal6 and/or Vbetal7 determinants. The method is used to screen for agents that inhibit the superantigen, especially those associated with MRSV-1 which is implicated in autoimmune disease, particularly multiple sclerosis. These agents are potentially useful for treatment or prevention (e.g. as vaccines) of autoimmune diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             u
                                                                                                                                                                                                                   polynucleotides
invention describes novel human secreted proteins encoded nucleotides isolated from human adult testes, adult brain, lor adult placenta, or murine adult bone marrow or thymus ries. The products of the invention are predicted to have fittes which would make them suitable for treating, prevent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, anti-inflammatory inhibition activity. The polynucleotides are also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                   1168

treating, preventing or ameliorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the diagnosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds), cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemastapolesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemastatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cacherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotide sequences are also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                     This is the human secreted protein AJ172_2 nucleotide sequence, obtained from a human adult testes cDNA library. The invention relates to secreted human and murine proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for
                                                                                                                                                                                                                                                                                                                                                                       New polynucleotides encoding products for the diagnosis and

New human retrovirus HERV-W ENV proteins/peptides having superantigen activity useful for diagnosing and treating multiple sclerosis -

Claim 13; Fig 10; 94pp; English.

On the basis of the PBS t-RNA motif used for the classification of human CC endogenous retrovirus (HERW9) the full length endogenous provirus which CC was been located on the long arm of human chromosome 7 (7921-22) has been CC designated HERV-W. The present invention describes proteins or peptides (I) having superantigen (SAg) activity comprising the ENV protein (ENV) CC of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I) CC have neuroprotective activity, and can be used in: vaccines; antisense-CC useful for diagnosing multiple Sclerosis (MS) or HERV-W-associated CC disorders. (I) are also useful for identifying substances (and optionally recovering) capable of binding to a retroviral superantigen associated CC with MS, substances capable of blocking transcription or translation of HERV-W retroviral SQG is useful of SAg activity and being sagactivity and substances CC devoid of SAg activity and being capable of superantigen. A protein or peptide derived from (I), modified to be CC devoid of SAg activity and being capable of subrances caid CC molecules encoding (I) are useful as vaccines against MS. Substances CC capable of blocking SAg activity, capable of binding to a retroviral CC userantigen associated with MS, or capable of binding to a retroviral CC capable of blocking SAg activity, capable of binding to a retroviral CC userantigen associated with MS, or capable of binding to a retroviral CC capable of SAG (I) and nucleic acids encoding them are useful for CC diagnosing autoimmune disease. The present sequence encodes the CC diagnosing autoimmune disease. The present sequence encodes the

The present sequence encodes a human endogenous retrovirus envelope protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypeptides and polynucleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells

The retrovirus is human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. HERV-W nucleic acid fragments, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell proliferation in vitro.

CC of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I) have neuroprotective activity, and can be used in: vaccines; antisense-cc therapy; and HERV-W ASQ activity-inhibitors. (I) and encoding DNA/RNA are useful for diagnosing multiple scherosis (MS) or HERV-W-associated CC disorders. (I) are also useful for identifying substances (and optionally recovering) capable of binding to a retroviral superantigen associated CC with MS, substances capable of blocking SAg activity and substances (compable of blocking transcription or translation of HERV-W retroviral CC superantigen. A protein or peptide derived from (I), modified to be CC devoid of SAg activity and being capable of generating an immune response CC against HERV-W retroviral SAg is useful in therapy. Nucleic acid CC molecules encoding (I) are useful as vaccines against MS. Substances CC capable of blocking SAg activity, capable of binding to a retroviral superantigen associated with MS, or capable of binding to a retroviral constantigen associated with MS, or capable of blocking transcription or CC preventing MS, obtained using (I) are useful for the treatment and CC preventing MS, obtained using (I) are useful for the treatment and CC preventing autoimune disease. The present sequence encodes the Specifically claimed envelope protein of HERV-W designated G.

The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abhormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes
                                                                                                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                                                                                  New nucleic acid sequences from human endogenous retrovirus-Wexpressed exclusively in placenta and useful in diagnosis and therapy of autoimmune disease, and abnormal or failed pregnan-
                                                                                                                                 Sequence

The fragment is originally derived from a novel retrovirus, human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for diagnosts of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell proliferation in vitro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gag

The invention relates to a spatially-addressable set of single exon cc nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting ct the probes with a collection of detectably labelled nucleic acids cound to each probe of the microarray. The probes are useful for cc verifying the expression of regions of genomic DNA predicted to cc encode proteins. They are useful for gene discovery, and for cc determining predisposition and/or prognosing breast disease. Gene cc expression analysis is useful for assessing the toxicity of chemical cc agents on cells. The microarray of this invention presents a far greater cd inversity of probes for measuring gene expression, with far less bias concept approduction of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Cc Note: The sequence data for this pattent did not form part of the cromator of the security of probes is a single exon nucleic acid probe of the invention. The content of the sequence data for this pattent did not form part of the content of the microarray of this pattent did not form part of the content of the content of the sequence of the invention.

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published not not compared directly

1 (bases 1 to 162579)
Grafham, D.
Direct Submission
Submitted (19-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone

requests: clonerequest@sanger.ac.uk

On Sep 19, 2000 this sequence version replaced gi:9944073.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome X, constructed by the Sanger Centre Chromosome X Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/ChrX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IMPORTANT: This sequence is not the entire insert of clone RP13-383K5 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP13-383K5 is at 1 in this sequence. The true left end of clone RP13-383K5 is at 1 in this sequence. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is an annotation using the 'unsure' feature key. RP13-383K5 is from the library RPCI-13.2 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     //www.chori.org/bacpac/home.htm
